

Siemens Healthineers AG

Company Overview

Siemens Healthineers AG is a German-headquartered global medical technology company active in imaging, diagnostics, cancer care, and minimally invasive therapies, augmented by digital health and artificial intelligence. Its business spans hardware systems, laboratory diagnostics, radiation oncology through its Varian subsidiary, digital health platforms, and a growing portfolio of AI-embedded clinical applications, all organized around an explicit mission to improve access to care for underserved populations worldwide.

The company's 2026 strategic posture is shaped by a November 2025 Capital Markets Day announcement in which it introduced a new strategy phase — "Elevating Health Globally" — targeting four of the most prevalent non-communicable diseases: stroke, cancer, cardiovascular diseases, and neurodegenerative diseases. This is a deliberate narrowing of clinical focus paired with a structural reorganization of reporting segments to align around Imaging (prevention and detection), Precision Therapy (treatment), and Diagnostics. The reorganization reflects a company that increasingly sees itself as a full-pathway partner in disease management, not only a device supplier.

Siemens Healthineers is especially relevant for UNC because of its active investment in North Carolina, its documented Value Partnerships model with U.S. academic health systems, and its deep alignment with clinical imaging infrastructure, radiation oncology, and health AI — all areas where UNC Health and the UNC research enterprise have substantial and growing capabilities.

Basic Company Information

Full Name	Siemens Healthineers AG
Headquarters	Erlangen, Germany
Website	https://www.siemens-healthineers.com
Investor Relations	https://www.siemens-healthineers.com/investor-relations

Company Type	Public (Aktiengesellschaft)
Ticker	FWB: SHL (DAX component)
Industry	Medical Technology / Imaging / Diagnostics / Cancer Care / Digital Health
Segments	Imaging; Precision Therapy; Diagnostics (restructured beginning FY2026)
Revenue (FY2025)	~EUR 23.4 billion (fiscal year ended September 30, 2025)
Employees	~74,000 worldwide
CEO	Dr. Bernd Montag
CFO	Dr. Jochen Schmitz
Primary Shareholder	Siemens AG (majority; deconsolidation announced November 2025)
Key U.S. R&D; Spend	~\$900 million annually
Key U.S. Facilities	Malvern, PA (Americas HQ); Palo Alto, CA (Varian); Charlotte, NC (Experience Center, under construction)

Sources: Siemens Healthineers FY2025 annual press release [1]; Siemens Healthineers U.S. investment press release [4]; Capital Markets Day [2].

Financial and Operating Position

Full Fiscal Year 2025 (ended September 30, 2025)

FY2025 Key Metrics: Revenue ~EUR 23.4B (+3.7% comparable YoY) | Adjusted EBIT margin 17.4% | Adjusted EBIT ~EUR 3.9B | Free cash flow EUR 2.7B | FY2026 guidance: comparable revenue growth 5-6%, adjusted basic EPS EUR 2.20-EUR 2.40 | Order backlog EUR 36B at fiscal year end.

Q1 FY2026 (ended December 31, 2025)

Q1 FY2026 Key Metrics: Adjusted basic EPS EUR 0.49 (approximately flat YoY despite tariff and currency headwinds) | Imaging and Precision Therapy core delivered higher profit and profitability | Diagnostics comparable revenue declined 3.1% due to structural changes in China market | Full-year FY2026 guidance confirmed.

These figures reflect a company in a period of managed portfolio transition: strong, profitable imaging and precision therapy performance offset by near-term pressure in diagnostics from a changing China market environment. Siemens Healthineers has disclosed that tariffs will have a pretax impact of up to EUR 300 million in FY2026, a headwind driving the decision to accelerate domestic U.S. manufacturing.

Business Segments and Product Platform

Imaging (Prevention and Detection)

The Imaging segment covers computed tomography (CT), magnetic resonance imaging (MRI), molecular imaging (PET-CT, PET-MR), X-ray, digital radiography, and multimodality data integration. Imaging generated approximately EUR 11.8 billion in FY2024 revenue, with approximately 45% recurring as of 2025. Beginning in FY2026, Imaging is the company's primary segment for disease prevention and early detection, directly enabling the four-disease strategic focus.

Precision Therapy (Treatment)

Precision Therapy is a newly consolidated segment combining Varian (radiation oncology), Advanced Therapies (image-guided minimally invasive procedures), and Ultrasound. Varian — acquired by Siemens Healthineers in 2021 — is the world's leading radiation oncology platform and operates manufacturing from Palo Alto, CA following the relocation of Varian production back to the U.S. in 2025. Precision Therapy targets high-single-digit revenue growth annually with margin expansion of approximately 100 basis points per year through FY2030.

Diagnostics (Laboratory and Point-of-Care)

The Diagnostics segment covers laboratory automation, immunoassay systems, hematology analyzers, molecular diagnostics, and point-of-care testing, with approximately 90% recurring revenue as of 2025. The segment is currently undergoing a transition in China and pursuing its own operational restructuring separate from Imaging and Precision Therapy.

Digital and AI Platform

teamplay digital health platform: A vendor-, device-, and system-neutral cloud and edge-computing platform connecting more than 5,000 institutions and 23,000 connected systems across 60+ countries. The platform hosts AI-Rad Companion applications, clinical analytics tools, and third-party AI integrations. It supports HIPAA compliance, ISO 27001 certification, and hybrid deployment models (cloud plus on-edge).

AI-Rad Companion: A suite of FDA-cleared AI-powered clinical software assistants for imaging interpretation. Multiple modules have received FDA 510(k) clearance, covering chest CT (pulmonary and cardiovascular), brain MR morphometry, prostate MR biopsy support, and organ contouring for radiation therapy planning (AI-Rad Companion Organs RT). All applications are DICOM-compliant and vendor-neutral.

AI Data Infrastructure: Siemens Healthineers operates an AI data lake containing more than two billion data points drawn from clinical images, lab results, genomics, and patient histories sourced from all five continents. Data undergoes anonymization before use in AI development.

Sources: Siemens Healthineers AI page [7]; teamwork platform page [8]; Capital Markets Day [2]; MedTech Dive [6].

Strategic Themes

- EUR 23.4 billion in FY2025 revenue across a global portfolio serving 180+ countries with direct representation in 70+, and a EUR 36 billion order backlog at fiscal year end.
- "Elevating Health Globally" strategy (November 2025) explicitly focused on four non-communicable diseases — stroke, cancer, cardiovascular disease, and neurodegenerative disease — with AI as the

primary clinical lever.

- Segment reorganization beginning FY2026: Imaging (prevention/detection), Precision Therapy (treatment, combining Varian, Advanced Therapies, Ultrasound), and Diagnostics operating independently. FY2027-2030 targets: 6-9% annual revenue growth from Imaging and Precision Therapy combined; 5-7% group growth; double-digit EPS growth.
- Value Partnerships model connecting Siemens Healthineers with more than 200 major customers globally — a multi-year, multi-million-dollar engagement structure combining equipment, consulting, research collaboration, and workforce development, expanding into disease-specific "Value Programs."
- \$150 million in new U.S. investments (May 2025) including a 60,000 sq ft Siemens Healthineers Experience Center at The Pearl, Charlotte, NC — part of a \$141 million commitment to Charlotte's research and innovation district.
- ~\$900 million in U.S. R&D; spending annually, plus more than \$1 billion invested in U.S. facilities, acquisitions, and strategic partnerships since 2019.
- Deconsolidation from Siemens AG announced November 2025; Siemens Healthineers will operate fully independently as a standalone public company.
- Tariff and supply chain risk actively managed: up to EUR 300 million pretax tariff impact projected for FY2026; partially addressed by domestic U.S. manufacturing relocation for Varian.

AI and Technology Signals

Siemens Healthineers' AI posture in 2026 is defined by clinical deployment at scale rather than platform ambition. Its AI development operates through an industrial "AI factory" model: large, diverse, and continuously expanding datasets feeding proprietary algorithms embedded directly into imaging and therapy hardware and accessible through the teamplay cloud platform.

AI Development Infrastructure

Siemens Healthineers' AI data lake holds more than two billion data points aggregated from public clinical registries, medical associations, and trusted research partners across all five continents. Data is rigorously anonymized and enriched with clinical annotations before use. The company describes this as a continuously expanding repository that enables iterative refinement of AI models as population diversity and clinical scope increase.

Named AI Products and Regulatory Status

- **AI-Rad Companion Chest CT** — FDA 510(k) cleared (2019); automatically identifies abnormalities in lungs, heart, and aorta; vendor-neutral (validated on GE and Philips equipment in addition to Siemens hardware).
- **AI-Rad Companion Brain MR for Morphometry Analysis** — FDA cleared; segments approximately 30 brain regions, measures volumes, and compares to normative reference data from the Alzheimer's Disease Neuroimaging Initiative (ADNI).

- **AI-Rad Companion Prostate MR for Biopsy Support** — FDA cleared; supports targeted MRI-ultrasound fusion biopsy.
- **AI-Rad Companion Organs RT** — FDA cleared (2020); automates contouring of organs at risk for radiation therapy planning using deep-learning algorithms.

Digital Twin and Emerging Modalities

Siemens Healthineers is actively developing digital patient twin capabilities — computational models of individual patient anatomy and physiology intended to support treatment planning and predictive monitoring. This includes work on modeling internal organ anatomy and represents an emerging area of investment with direct relevance to precision oncology and neurodegenerative disease monitoring.

Caution: Frame Siemens Healthineers as a clinical AI company with FDA-cleared products at scale, not as a foundation model or large language model developer. Its AI advantage is domain-specific imaging intelligence and a proprietary clinical data lake, not general-purpose AI infrastructure.

Sources: Siemens Healthineers AI page [7]; Siemens Healthineers FY2025 press release [1]; FDA clearance press releases [9][10][11].

Health System and Partnership Infrastructure

Value Partnerships Model

Siemens Healthineers' Value Partnerships are multi-year, multi-dimensional agreements with health systems that bundle equipment procurement, consulting, clinical operations improvement, research collaboration, and workforce development. The company currently holds Value Partnerships with more than 200 major customers globally and is expanding the model into disease-specific "Value Programs" targeting the four priority non-communicable disease areas.

Named U.S. Academic Health System Value Partnerships

- **Ohio State University Wexner Medical Center (November 2024):** 10-year, \$105 million Value Partnership for translational research in diagnostic and therapeutic imaging, AI and machine learning in radiology and radiation oncology, and access to care for underserved patients. Dedicated Siemens Healthineers scientists embedded with Ohio State clinical and research teams at a new center for imaging excellence.
- **University of Missouri System and MU Health Care:** 10-year, \$133 million Value Partnership including equipment for the NextGen Precision Health Institute, joint research projects in precision medicine, and curricula co-development in data science, machine learning, and AI for healthcare.
- **University Hospitals Cleveland and Case Western Reserve University (May 2024):** 10-year strategic alliance building on a 40-year collaboration; focused on oncology, cardiovascular, neurovascular, Alzheimer's disease, theranostics, and novel MR technology development.
- **OU Health and University of Oklahoma Health Sciences:** 10-year Value Partnership including the MAGNETOM Terra 7 Tesla MRI (one of five in the Midwest) and NAEOTOM Alpha photon-counting CT scanner.

North Carolina Presence

- **\$141 million commitment to The Pearl, Charlotte, NC** — a research and innovation district. Construction of a 60,000 sq ft Siemens Healthineers Experience Center is underway as of May 2025. North Carolina Governor Josh Stein cited the investment as evidence of North Carolina's research and health education leadership.
- **Atrium Health Value Partnership** (Charlotte-based, serving NC, SC, GA, and AL): a multi-year Value Partnership involving more than \$140 million in equipment purchases — advanced imaging technology, radiation oncology, and precision endovascular robotics — with a focus on rural and underserved communities in the southeastern U.S.

Alignment with UNC Research

No direct named UNC-Siemens Healthineers institutional partnership has been identified from the current source set. The following represents strategic alignment based on documented Siemens Healthineers capabilities, its active North Carolina footprint, and UNC's known research and clinical strengths. A dedicated follow-up research pass targeting named UNC faculty, UNC Health equipment contracts, sponsored research records, and any existing CHIP or NC TraCS engagements with Siemens is recommended before making partnership claims.

Three Strategic Framing Pillars for UNC

- **Clinical imaging infrastructure and AI co-development:** Siemens Healthineers' Value Partnerships model — demonstrated with Ohio State, University Hospitals, and OU Health — is directly transferable to UNC Health. UNC Health's 17-hospital system, Epic-integrated infrastructure, and SHIRE AI research environment create a defensible basis for a Value Partnership combining equipment, AI co-development, and research collaboration.
- **Oncology and radiation therapy:** Varian, a Siemens Healthineers company, is the world's leading radiation oncology platform. UNC Lineberger Comprehensive Cancer Center — an NCI-designated center with the ARPA-H EVOLVE trial, decentralized clinical trials, and 200-plus active trials — is a natural Varian research and clinical deployment site.
- **Precision medicine and digital health informatics:** Siemens Healthineers' AI data lake, AI-Rad Companion applications, and teamplay digital health platform align with UNC's CHIP biomedical informatics program, NC TraCS translational science infrastructure, and SHIRE's multimodal data integration capabilities (imaging, genomics, clinical notes).

Specific UNC Research Fit Areas

- **UNC Lineberger Comprehensive Cancer Center:** Varian radiation oncology integration, AI-based treatment planning (AI-Rad Companion Organs RT), and molecular imaging for PET-guided cancer care trials all align with Lineberger's clinical and research footprint. The ARPA-H EVOLVE trial's biomarker-adaptive model is particularly compatible with Siemens' precision oncology positioning.

- **UNC Health imaging infrastructure:** UNC Health operates a statewide system of 17 hospitals and 900-plus clinics. A Value Partnership anchored by AI-enabled imaging systems (NAEOTOM Alpha photon-counting CT, MAGNETOM MRI systems) would fit within the same framework Siemens Healthineers has executed with Ohio State and OU Health.
- **UNC CHIP and SHIRE:** The CHIP biomedical informatics program and the SHIRE secure health informatics environment create a credentialed research infrastructure for co-developing and validating imaging AI models using UNC Health EHR and imaging data.
- **NC TraCS and theranostics:** University Hospitals' alliance includes a theranostics focus — combining diagnostics and therapeutics to treat advanced cancers. NC TraCS, as UNC's NIH-funded CTSA hub, provides the translational and regulatory infrastructure to support similar theranostics trial development at UNC.
- **Rural health and access to care:** Siemens Healthineers' Atrium Health Value Partnership focuses explicitly on rural health equity using Siemens imaging and radiation oncology technology across NC and the Southeast. UNC Health's rural footprint across all 100 NC counties creates a natural complementary geography.
- **UNC Gillings School and population health informatics:** The AI and Public Health Center (CAIPH) at Gillings aligns with Siemens Healthineers' disease-level population modeling interests embedded in its AI data lake strategy.

Recommended Enrichment Targets

- UNC Health Department of Radiology and UNC Health Imaging leadership
- UNC Lineberger Comprehensive Cancer Center — radiation oncology and molecular imaging programs
- UNC CHIP program (biomedical informatics) and SHIRE governance team
- NC TraCS clinical research infrastructure team
- UNC School of Medicine — clinical informatics and digital health programs
- UNC Health Rural Health leadership and UNC Health Southeastern

Talking Points

Organizational Context

- Siemens Healthineers is a EUR 23.4 billion global medical technology company with a EUR 36 billion order backlog and approximately 74,000 employees — a full-spectrum MedTech enterprise with a documented track record of multi-year, multi-million-dollar institutional partnership commitments in U.S. academic health systems.
- The company is in a period of strategic consolidation: the "Elevating Health Globally" phase narrows clinical focus to four diseases, restructures segments around Imaging and Precision Therapy as a synergistic core, and separates Diagnostics for independent optimization.

- Siemens Healthineers is simultaneously managing deconsolidation from Siemens AG, tariff-related cost pressure of up to EUR 300 million in FY2026, and accelerated U.S. domestic manufacturing — signals of a company actively strengthening its U.S. presence.
- The company's \$900 million in annual U.S. R&D; spending and \$141 million committed to Charlotte's Pearl district represent a level of North Carolina engagement that provides a direct and credible bridge to UNC outreach.

Research and Innovation Relevance

- Value Partnerships with Ohio State Wexner Medical Center (10-year, \$105 million, November 2024) and University Hospitals Cleveland (10-year, May 2024) demonstrate the company's current appetite for academic health system investment — embedded research scientists, joint AI/ML development, clinical imaging excellence centers — all mirroring what could be structured at UNC.
- The AI-Rad Companion suite represents the only FDA-cleared, vendor-neutral imaging AI platform from a major MedTech company with direct DICOM integration and deployment at scale across 5,000+ institutions. UNC researchers studying clinical AI validation or imaging informatics would find this a credible and accessible research substrate.
- Siemens Healthineers' four-disease focus — cancer, cardiovascular, stroke, neurodegenerative — maps directly onto UNC's clinical and translational strengths at Lineberger (cancer), UNC Hospitals (cardiovascular and neurosciences), and NC TraCS (clinical trial infrastructure).

Alignment with Academic Health Systems

- Siemens Healthineers' Value Partnerships model is structurally designed for academic health systems: it is not a one-time equipment sale but an ongoing operating relationship providing co-funded clinical operations improvement, research collaboration, and workforce development.
- The company's stated intent to expand Value Partnerships into disease-specific "Value Programs" — aligning around the four priority non-communicable diseases — signals a new phase of engagement in which clinical focus, not just hardware volume, determines partnership structure.
- Siemens Healthineers' North Carolina presence — the Charlotte Experience Center, the Atrium Health partnership, and the Governor's cited recognition of the investment — means the company already understands and has made commitments to the North Carolina healthcare market.

Risk and Caution Notes

- Do not imply a formal UNC-Siemens Healthineers partnership without evidence from a dedicated follow-up research pass targeting named agreements, equipment contracts, or existing CHIP/NC TraCS engagements.
- Siemens Healthineers' fiscal year ends September 30. FY2025 figures cover October 1, 2024 through September 30, 2025. Financial comparisons to calendar-year companies (Pfizer, Microsoft) should account for this timing difference.
- Revenue is reported in euros. Do not convert to USD without specifying the exchange rate and date; currency effects are a named management concern in FY2026 guidance.

- The deconsolidation from Siemens AG — announced November 2025 — is subject to regulatory approvals. Until completed, governance and strategic decision-making authority may involve Siemens AG. Confirm current ownership and governance status before formal outreach.
 - Do not conflate Siemens Healthineers with Siemens AG or Siemens Corporation; these are legally distinct entities. The Siemens AG investment in North and South Carolina data center infrastructure (announced March 2026) is a Siemens Corporation initiative, not a Siemens Healthineers initiative.
 - Tariff impact projections (up to EUR 300 million pretax in FY2026) are company guidance, not audited results.
 - The AI data lake size (2 billion+ data points) is sourced from the Siemens Healthineers AI innovation page. This is a marketing claim and has not been independently audited.
-

Expected Report Angle and Positioning

Positioning Summary: Siemens Healthineers should be framed as (1) the world's leading dedicated medical technology company by scope, with EUR 23.4 billion in FY2025 revenue, ~74,000 employees, and operations in 180+ countries, now entering a focused "Elevating Health Globally" phase targeting stroke, cancer, cardiovascular disease, and neurodegenerative disease using AI as its primary clinical lever; (2) the owner and operator of the Varian radiation oncology platform — the most advanced and widely deployed radiation therapy system globally — making it the natural partner for UNC Lineberger's oncology research and clinical programs; (3) an active investor in North Carolina, with \$141 million committed to The Pearl in Charlotte and an existing Atrium Health Value Partnership serving the southeastern U.S., providing credible geographic and institutional common ground for UNC engagement; (4) an established model for deep academic health system partnership through its Value Partnerships framework — currently deployed at Ohio State, University Hospitals Cleveland, University of Missouri, and others — which combines equipment investment, embedded research collaboration, AI co-development, and workforce development in a model directly applicable to UNC Health; and (5) a different type of partner than Microsoft or Pfizer — with stronger relevance to clinical imaging hardware, radiation oncology, laboratory diagnostics, imaging AI validation, and health system operational consulting than to cloud infrastructure, enterprise software, or therapeutic pipeline development.
